

The Vendor Evaluation **Card**

A DIY evidence pack on
whether a tool is safe for your
business data.

⚡ Human Spark

THE MODEL

1 Training

Does the policy explicitly say they do not train on your data?

2 Data retention

How long do they keep your inputs, and can you delete them?

3 Security

Encryption, access controls, and where the data is hosted.

4 Reference

Can they point to real customers running it the way you would?

THE RULE

If the evidence is not public, assume the protection does not exist.

Before putting business data into a tool you cannot audit or negotiate with.
